DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed 10/10/2005, with respect to Claims 1-11 and 15-25 have been fully considered and are persuasive. The rejection of claims 1-11 and 15-25 under 35 USC § 102(b) has been withdrawn.

Allowable Subject Matter

2. Claims 1-25 are allowed.
3. The following is an examiner's statement of reasons for allowance.

- The prior art fails to teach a method/system of Claims 1, 5, 7, 12, 15, and 20 that specifically comprises the following:

-- The instant application is deemed to be directed to a non-obvious improvement over the admitted prior art of the instant application and the invention patented in Pat. No. US 5,235,615, US 5,828,659, US 6,275,705, and US 6,094,562. The improvement comprises-

With regard claims 1 and 5, "determining a time delay between reception at a predetermined point in said coverage area that is not coincident with the first or second transmitter of a first signal S_1 transmitted from said first transmitter at a first frequency f_1 and a second signal S_2 transmitted from said second transmitter at said first frequency f_1 " as recited,

With claims 7, 15, and 20, "wherein the first and second transmission delays are determined in coordination so that the transmitted

first signal and the transmitted second signal arrive at the receiver within a time δ of each other, where δ is greater than zero but less than a guard interval length used in the transmitting steps." as recited, and

With regard claim 12, "receiving from at least two of the plurality of transmitters the useful signals and the interfering signals; canceling out the interfering signals using the received training sequences for the useful signals and the received training sequences for the interfering signals." as recited.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. Reference(s) US 6,275,705, and US 6,094,562 are cited because they are put pertinent to a wireless communication system with the time delay between transmitters and a fixed receiver. However, none of references teach detailed connection as recited in claim.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ted M. Wang whose telephone number is (571) 272-3053. The examiner can normally be reached on M-F, 7:30 AM to 5:00 PM.
